WORK EXPERIENCE

Full-stack Developer

Biz Launch Equity, Inc
Sep, 2020 – current

- Fully implemented a messaging and chat update system using WebSockets.
- Developed an Elixir system for sending messages to clients via Redis Streams and then WebSockets.
- Built an Elixir service that streamed webinars to Facebook Groups.
- Developed a desktop application using Electron and mobile applications using React Native.
- Created a service that duplicated messages or questions to Slack, allowing responses directly from Slack.
- Covered half of the project with tests to improve stability.

Software Engineer / Developer

Wellnuts, Ltd
Feb, 2018 – Aug, 2020

- Built a trip simulator from scratch using GenServers (actor model in Elixir).
- Developed a simple SFTP server in Go that integrated with AWS S3.
- Implemented a vehicle clustering system using PostgreSQL with the PostGIS extension.
- Optimized GraphQL queries and mutations.
- Implemented a notification token invalidation system for expired tokens.

Web Developer

Modus Group, LLC (from Radius Telematics)
May, 2016 – Feb, 2018

- Optimized Grape API endpoints.
- Completely refactored the behavior of a model, including callbacks, and moved the logic into service objects.
- Rewrote all email templates using table-based HTML layout.
- Maintained and developed an Elixir API.
